SUMMARY

AI Agent Developer specializing in building **autonomous agentic workflows** and production-grade **Generative AI** systems. Expert in orchestrating **Large Language Models (LLMs)** for **reasoning, planning, and tool-execution** using **LangChain** and **LangGraph**. Proven track record in developing high-performance **Agentic RAG** systems and deploying scalable AI infrastructures via **MLOps** pipelines.

TECHNICAL SKILLS

AI and Agentic Frameworks: LangChain, LangGraph, CrewAI, Function Calling, Tool-Use Orchestration
Generative AI: RAG, Agentic RAG, Vector Databases (FAISS, Chroma), Google Gemini API, Embeddings
Core AI/ML: PyTorch, TensorFlow, Scikit-learn, OpenCV, NLTK, LLM Fine-tuning
Backend & APIs: FastAPI (Asynchronous Agents), Flask, RESTful Tool Integration, Redis (Agent Memory)
MLOps & Infrastructure: Docker, GitHub Actions (CI/CD), MLflow, AWS (EC2), Linux (Bash), Git
Databases: MySQL, Redis (Vector Caching), SQLite, FAISS

PROJECTS

Agentic Enterprise Copilot – Autonomous Document Intelligence Agent

[🔗 Link](#)

Python, LangChain, FastAPI, FAISS, Gemini, Redis, Docker

Sep 2025 – Dec 2025

- Developed an **autonomous document agent** capable of reasoning over 1,000+ enterprise documents, reducing information retrieval time by **60%**.
- Implemented **persistent agent memory** using **Redis**, enabling multi-turn context retention and context-aware responses.
- Orchestrated **Agentic RAG** using **FAISS HNSW indexing**, achieving **sub-200ms latency** and a **Recall@10 of 92%**.
- Integrated **Function Calling** to allow the agent to interface with modular **FastAPI** backends for real-time data analysis.

Autonomous Financial Fraud Detection Agent

[🔗 Link](#)

Python, Scikit-learn, MLflow, Docker, CI/CD, Automated Inference

March 2025 – June 2025

- Built an **automated decision-making pipeline** to detect fraudulent transactions in real-time, handling **500+ TPS (Transactions Per Second)**.
- Integrated **automated feedback loops** via **MLflow** for model registry and tracking, ensuring **100% versioning reliability**.
- Automated the agent's deployment and self-testing cycle via **GitHub Actions (CI/CD)**, reducing deployment overhead by **40%**.

Visual Perception Agent (Autonomous Navigation)

[🔗 Link](#)

Python, OpenCV, NumPy, Computer Vision Agents

Oct 2024 – Jan 2025

- Engineered a **computer vision agent** for real-time lane detection, utilizing adaptive thresholding to achieve **95% accuracy**.
- Optimized the perception agent to run at **35 FPS (Real-time)** on CPU hardware, enabling low-latency **autonomous decision-making**.

EXTRACURRICULAR ACTIVITIES

- **BlockDAG Hackathon 2025 (Round 2 Qualifier):** Built **GhostWallet**, a decentralized wallet agent utilizing ****smart contracts**** for automated transactions.
- **Open Source Contribution:** Active contributor to developer communities, focusing on optimizing ****LLM tool-calling**** and ****RAG efficiency****.
- **Volleyball Team Captain:** Led team strategy and coordination, demonstrating strong **leadership** and **tactical planning** skills.

CERTIFICATIONS

- **Generative AI using IBM Watsonx** — Focused on **LLM Orchestration** and **Prompt Engineering** (2025)
- **OCI AI Foundations** — Oracle University (2025)
- **Cyber Security Analyst** — IBM Career Education Program (2025)
